

#### LOCATION

This shows a typical location:

The rig drilling through the conductor pipe, the water pit and mud pit with a security fence around them, the various laydown areas and offices, the run-off from one side and access road from the other side, pipe and chemical storage areas.

#### RIG MATS

The client PDO is always open to innovative ideas that generate savings in time and in resources.

Here we see very strong mats that replace concrete and could be reused several times.

#### CONCRETE PADS

Around the cellar at the footprint of the rig, a concrete hardstanding is cast to take the weight.

This area is surrounded by drainage ditches that guide the water into the cellar.

Eventually, this water is pumped out to the pits.

#### LEVELLING LAYERS

The materials used come from approved local borrow pits. They are treated and wetted before they reach the site.

Modern and adequate equipment is used to meet the project quality standards and maintain an optimal production rate.

#### PETROLEUM DEVELOPMENT OMAN - EARTHWORK CONTRACT - QARN ALAM

Upstream operators in Oman have extensive drilling programs whether for exploration, production, or EOR (Enhanced Oil Recovery) purposes.

Depending on the type of rig, there are various configurations for the locations.

The requirements also depend on the expected depth of each well.

Furthermore, drilling programs may vary within short times.

Therefore, it is advisable to construct some locations ahead of rig moves (buffer).

Sarooj have got the call-off contract to build locations and access roads.

Depending on the objectives (oil or gas) the requirements are affected.

Sarooj typically build access roads, platforms, cellars, stove pipes, pits, fences and flares.

Sometimes we build camp sites and several miscellaneous civil and building works.

Restoration works may also be required on abandoned wells.

#### HSE CELEBRATIONS

Considering the importance of working safely, i.e. in a manner that does not cause undue negative impact on the people, their health or the environment, HSE good performances are frequently celebrated and best achievers rewarded in the presence of high management officials from client, contractor and sub-contractor.
